

Attention

Dear iPhone & iPad Customers

Automatic Data Transmission

● In general, smartphones, due to their software and applications, periodically conduct automatic data transmissions. By synchronizing the smartphone's data automatically, the device can be constantly updated to the latest data and its functionality will improve. Please note that automatic data transmissions can result in packet data charges which may cause the monthly charge to go over the lower limit (applicable to the Unlimited Packet Discount Flat for SMARTPHONE, Standard Price Plan Unlimited Packet Discount for SMARTPHONE and iPad Zero Start Flat-rate Data Plan).

(Examples)

Sync Calendar and Address Book, App Store (queries for available updates), System time updates, General device location, Individual apps

● To stop automatic data transmissions, please turn off the cellular data connection on your smartphone by taking the following steps;

■ How to stop automatic data transmissions

• [Settings] → [General] → [Network] → [Cellular Data] → Switch [OFF]

*Please also note that you will not be able to use any data communication such as internet browsing when the cellular data connection is turned off. In this case, incoming and outgoing calls, SMS, and data communication with Wi-Fi are available.

【Individual Settings】

• [Settings] → [Location Services] → Switch [OFF]

• [Settings] → [Notifications] → Switch [OFF]

• [Settings] → [Mail, Contacts, Calendars] → [Fetch New Data] → [Push] → Switch [OFF]

*Please note that packet data charges may go over the lower limit depending on your usage, even if you set up these individual settings.

● Because automatic data transmission may result in data packet charges of more than several thousand yen per day when you use your smartphone overseas, we recommend that you to use our "Global Roaming Packet Flat Rate" to avoid excessive charges. Please note that setting "Data Roaming" is off as the default setting.
